1. In quadrilateral $ABCD$, $\angle B$ is a right angle, diagonal $\overline{AC}$ is perpendicular to $\overline{CD}$, $AB = 18$, $BC = 21$, and $CD = 14$. Find the perimeter of $ABCD$.
2. Let set $\mathcal{A}$ be a 90-element subset of $\{1, 2, 3, \dots, 100\}$, and let S be the sum of the elements of $\mathcal{A}$. Find the number of possible values of S .
3. Find the least positive integer such that when its leftmost digit is deleted, the resulting integer is $\frac{1}{29}$ of the original integer.

4. Let N be the number of consecutive 0's at the right end of the decimal representation of the product $1! 2! 3! 4! \cdots 99! 100!$. Find the remainder when N is divided by 1000.

5. The number

$$\sqrt{104\sqrt{6} + 468\sqrt{10} + 144\sqrt{15} + 2006}$$

can be written as $a\sqrt{2} + b\sqrt{3} + c\sqrt{5}$, where a , b , and c are positive integers. Find $a \cdot b \cdot c$.

6. Let $\mathcal{S}$ be the set of real numbers that can be represented as repeating decimals of the form $0.\overline{abc}$ where a , b , c are distinct digits. Find the sum of the elements of $\mathcal{S}$.

7. An angle is drawn on a set of equally spaced parallel lines as shown. The ratio of the area of shaded region $\mathcal{C}$ to the area of shaded region $\mathcal{B}$ is $\frac{11}{5}$. Find the ratio of the area of shaded region $\mathcal{D}$ to the area of shaded region $\mathcal{A}$.

8. Hexagon $ABCDEF$ is divided into five rhombuses, $\mathcal{P}$, $\mathcal{Q}$, $\mathcal{R}$, $\mathcal{S}$, and $\mathcal{T}$, as shown. Rhombuses $\mathcal{P}$, $\mathcal{Q}$, $\mathcal{R}$, and $\mathcal{S}$ are congruent, and each has area $\sqrt{2006}$. Let K be the area of rhombus $\mathcal{T}$. Given that K is a positive integer, find the number of possible values for K .

9. The sequence $a_1, a_2, \dots$ is geometric with $a_1 = a$ and common ratio r , where a and r are positive integers. Given that $\log_8 a_1 + \log_8 a_2 + \dots + \log_8 a_{12} = 2006$, find the number of possible ordered pairs (a, r) .

10. Eight circles of diameter 1 are packed in the first quadrant of the coordinate plane as shown. Let region $\mathcal{R}$ be the union of the eight circular regions. Line ℓ , with slope 3, divides $\mathcal{R}$ into two regions of equal area. Line ℓ 's equation can be expressed in the form $ax = by + c$, where a , b , and c are positive integers whose greatest common divisor is 1. Find $a^2 + b^2 + c^2$.

11. A collection of 8 cubes consists of one cube with edge-length k for each integer k , $1 \leq k \leq 8$. A tower is to be built using all 8 cubes according to the rules:
- Any cube may be the bottom cube in the tower.
 - The cube immediately on top of a cube with edge-length k must have edge-length at most $k + 2$.

Let T be the number of different towers that can be constructed. What is the remainder when T is divided by 1000?

12. Find the sum of the values of x such that $\cos^3 3x + \cos^3 5x = 8 \cos^3 4x \cos^3 x$, where x is measured in degrees and $100 < x < 200$.

13. For each even positive integer x , let $g(x)$ denote the greatest power of 2 that divides x . For example, $g(20) = 4$ and $g(16) = 16$. For each positive integer n , let $S_n = \sum_{k=1}^{2^{n-1}} g(2k)$. Find the greatest integer n less than 1000 such that S_n is a perfect square.

14. A tripod has three legs each of length 5 feet. When the tripod is set up, the angle between any pair of legs is equal to the angle between any other pair, and the top of the tripod is 4 feet from the ground. In setting up the tripod, the lower 1 foot of one leg breaks off. Let h be the height in feet of the top of the tripod from the ground when the broken tripod is set up. Then h can be written in the form $\frac{m}{\sqrt{n}}$, where m and n are positive integers and n is not divisible by the square of any prime. Find $\lfloor m + \sqrt{n} \rfloor$. (The notation $\lfloor x \rfloor$ denotes the greatest integer that is less than or equal to x .)

15. Given that a sequence satisfies $x_0 = 0$ and $|x_k| = |x_{k-1} + 3|$ for all integers $k \geq 1$, find the minimum possible value of $|x_1 + x_2 + \cdots + x_{2006}|$.
